

MANAGER TRAINING GUIDE

Bonus Management

How the Woodland processor bonus is calculated, entered, reviewed, signed, and delivered to payroll — the complete monthly workflow for facility and operations managers.

System DR3-Vision · dr3-vision.svdg.us

Scope Woodland site processor bonus (V2)

Audience Facility Manager, Operations Manager, Administrators

Authority Verified against the live bonus engine & ADR-0019

Welcome & Who Does What

This guide walks you through the entire monthly bonus cycle for the Woodland processing floor — from the first daily mattress count to the signed report landing in payroll. Every number you see here is produced by the same calculation engine that runs the live system, so the figure on your screen, on the signed PDF, and in the exported spreadsheet are always identical.

The bonus, in one sentence

WHAT A BONUS IS

Each processor earns a small per-mattress bonus for every mattress they process **above a daily threshold**. The more they process beyond the threshold, the more they earn — with an extra tier kicking in at very high volume.

Roles & permissions

Bonus Management is restricted. Who can do what is enforced by the system on every page and every action — not just hidden from the menu.

ROLE	WHO	CAN DO
Administrator	Bill, Kelsey	Everything: view, enter, sign (as a stand-in), amend a locked month , back-date entries, export.
Facility Manager Woodland	Janette (Woodland site manager)	View, enter daily counts, and provide the first (facility) signature .
Operations Manager	Morena (covers both sites)	View, enter, and provide the second (operations) signature . May stand in for the facility signature if needed.
Eugene Manager	Rick	No access Bonus is Woodland-only; the system returns “forbidden.”
Operator / Floor	Processing staff	No portal access. Counts are entered on their behalf by a manager.

KEY IDEA — TWO SIGNATURES

A month is only final when **both** the facility signature (Janette) and the operations signature (Morena) are in. Order does not matter; the system tracks each slot independently.

What is in this guide

1	How the bonus is calculated (the exact rule)	p.3	2	The monthly lifecycle at a glance	p.4
3	Daily entry & the end-of-day check	p.4	4	Managing the roster (add, rename, reactivate)	p.5
5	Closing the month & signing	p.6	6	Amending a signed month	p.7
7	Reports, CSV export & FAQ	p.8			

1 · How the bonus is calculated

The bonus is calculated **per processor, per day**, then summed across the month. The rule is never hard-coded — it is read from the site's active bonus-rule record, so a future rate change applies automatically without a code change.

The Woodland daily formula

DAILY BONUS FORMULA

$$\text{daily} = \text{MAX}(\text{units} - 50, 0) \times \$0.50 + \text{MAX}(\text{units} - 74, 0) \times \$0.25$$

PARAMETER	VALUE	MEANING
Low threshold	50	No bonus on the first 50 mattresses each day.
Low rate	\$0.50	Each mattress from 51 onward earns \$0.50.
High threshold	74	The extra tier begins above 74.
High rate	+\$0.25	Each mattress from 75 onward earns an <i>additional</i> \$0.25 (so \$0.75 total).

In plain terms: mattresses 51–74 each earn **\$0.50**; mattresses 75 and up each earn **\$0.75**.

Worked examples

MATTRESSES IN A DAY	HOW IT BREAKS DOWN	DAILY BONUS
40	Below threshold — nothing earned	\$0.00
50	At threshold — still nothing	\$0.00
60	10 × \$0.50	\$5.00
74	24 × \$0.50	\$12.00
75	25 × \$0.50 + 1 × \$0.25	\$12.75
100	50 × \$0.50 + 26 × \$0.25	\$31.50

WHY 74, NOT 75

The original spreadsheet used a high threshold of 75, which was off by one. DR3-Vision uses the corrected value of **74** so that the 75th mattress is the first to earn the higher tier. This is the single source of truth for every payout.

Precision

All money is stored internally in whole cents to avoid rounding drift. A dollar amount is only ever produced at the moment it is displayed, so totals always add up exactly.

2 · The monthly lifecycle

Every Woodland bonus month moves through a fixed sequence of states. The system enforces the path — you can never skip a step or sign out of order.

STATE	WHAT IT MEANS	WHO ACTS NEXT
Draft	The month is open; daily counts are being entered.	Managers enter counts
Pending signatures	Month closed; totals frozen, awaiting both signatures.	Facility manager signs
Partially signed	One signature is in; one remains.	The other signer signs
Signed	Both signatures captured; PDF generated & emailed to payroll.	Payroll / admin
Paid	Marked paid by payroll.	—
Amended	A signed/paid month was re-opened by an admin to correct it.	Re-enter, re-sign

THE ONE RULE TO REMEMBER

Daily counts can only be edited while the month is **Draft** or **Amended**. Once a month moves to *Pending signatures*, the totals are locked — this is what makes a signature meaningful.

3 · Daily entry

- 1 Open the bonus grid.** Go to `/bonus`. The current month's draft is created automatically the first time you enter a count.
- 2 Enter each processor's mattress count for the day.** Counts are whole numbers (0–999). Add an optional note if something is unusual.
- 3 The bonus is shown live.** As you type, the grid shows the per-day bonus using the active rule — the same engine the signed PDF uses.
- 4 Save.** Each entry is recorded with who entered it and when. Re-entering a day's count simply updates it (no duplicates).

The end-of-day check

At **5:00 PM Pacific** the system checks whether every active processor has a count for the day. If any are missing, it sends a single reminder alert.

- **Weekends & site holidays are skipped** — no alert fires.
- The alert fires **at most once per day**; a late entry the next morning does not retroactively cancel it.
- If everyone already has a count, no alert is sent.

4 · Managing the roster

The roster is the list of Woodland processors eligible for the bonus. Keeping it accurate is what makes the daily grid and the reports correct.

Adding a processor

- 1 Enter the processor's full name.** This name drives the display everywhere — the grid, the signed PDF, and the reports.
- 2 Watch for a rehire prompt.** If the name matches someone who was previously deactivated, the system will ask “Reactivate this person?” instead of creating a duplicate.
- 3 Save.** The new processor appears on the next daily grid.

NO ACCIDENTAL DUPLICATES

The system never silently creates a second record for the same person. A returning processor is **reactivated**, preserving their entire history.

Renaming a processor

When someone's name changes (e.g., marriage), use **Rename** rather than creating a new record. The system:

- Updates the displayed name everywhere immediately.
- Keeps the previous name on file as a “previously known as” note, with the date it changed.
- Leaves historical months intact — reports always show the *current* name, with the old name available as provenance.

Deactivating & reactivating

ACTION	EFFECT
Deactivate	Removes the processor from new daily grids and the end-of-day check. All past entries and earnings are kept.
Reactivate	Brings a returning processor back onto the grid with their full earnings history intact.

NEVER DELETE TO CLEAN UP

Deactivate — do not try to erase. The bonus record is an earnings record; it is kept for history, reporting, and audit. Deactivating is the correct way to take someone off the active list.

5 · Closing the month & signing

Closing the month

A month leaves Draft and enters **Pending signatures** in one of two ways:

- **Automatically** — once the calendar month has fully ended, the system closes it the next day and freezes the totals.
- **Manually** — a manager can close it from the month view when all counts are in.

The moment a month closes, the facility manager is emailed: “*The bonus report is ready for your signature.*”

The two signatures

SIGNATURE SLOTS

There are exactly two slots: the **facility signature** (Janette) and the **operations signature** (Morena). Either may sign first. When the first lands, the month becomes *Partially signed* and the remaining signer is emailed automatically.

- 1 **Open the month.** Review the totals and per-processor figures.
- 2 **Sign your slot.** Your name, the date/time, and your network address are recorded against your slot. You cannot sign a slot that is already signed.
- 3 **The other signer is prompted.** They get an email with a direct link.
- 4 **When the second signature lands,** the month becomes **Signed**: the total is locked, the PDF is generated, and it is emailed to payroll automatically.

SIGNING ON SOMEONE'S BEHALF (OVERRIDE)

If a signer is unavailable, an authorized stand-in can sign their slot **with a written reason**. Authority is strict:

- The **facility** slot may be signed for by an **administrator** or by the **operations manager**.
- The **operations** slot may be signed for by an **administrator only**.
- The facility manager cannot override the operations slot.

Every override records who actually signed, on whose behalf, and the reason — and it appears on the PDF.

AFTER SIGNING

Once a month is **Signed**, the figures are final and the PDF is on its way to payroll. Corrections from this point require an admin *amendment* — see the next page.

6 · Amending a signed month

Sometimes a correction is needed after a month is already signed (or even paid) — a miscounted day, a missed processor. This is handled by a controlled **amendment**, which is **administrator-only** (Bill or Kelsey).

How an amendment works

- 1 **An admin unlocks the month with a written reason.** The month moves to **Amended**, and **both signatures are cleared** — they will have to be collected again.
- 2 **The counts become editable again.** Only the specific month being amended is unlocked; the current live month is untouched.
- 3 **The admin re-submits the month.** It returns to **Pending signatures** and the signature flow starts over, beginning with a fresh email to the facility manager.
- 4 **Both signatures are re-collected,** a fresh PDF is generated, and the new version goes to payroll.

NOTHING IS EVER LOST

When a month is unlocked, the complete prior signed state — both signatures, who signed, when, and from where — is preserved in the audit trail before anything is cleared. The original signed PDF is also kept; the amended report is a new version.

THE PDF MARKS ITSELF AS AMENDED

An amended report carries a clear “**AMENDED**” marker and a note that it *supersedes the prior version emailed on [date]*, so payroll always knows which version is authoritative.

Why amendments are locked down

- A signed bonus report is a financial attestation — it should not change quietly.
- Restricting amendments to administrators, requiring a written reason, and re-collecting signatures keeps the report trustworthy.
- Every step is recorded in the append-only audit log.

MANAGERS: WHAT TO DO

If you spot an error in a signed month, **tell an administrator** with the specifics (which processor, which day, the correct count). They will run the amendment and you will be asked to re-sign.

7 · Reports, exports & FAQ

Where to find the numbers

VIEW	SHOWS
Monthly report	The full per-processor breakdown for a single month — the basis for the signed PDF.
Per-employee history	One processor across every month, with year-to-date and a last-12-months trend.
Annual summary	Every processor's totals for the year — mattresses, qualifying days, and bonus dollars.

CSV export

The annual summary exports to a spreadsheet-ready CSV with these columns:

COLUMN	CONTENTS
employee	Current display name
previously_known_as	Any prior names (semicolon-separated)
active	yes / no
total_mattresses	Mattresses processed for the year
days_qualified	Days the processor earned a bonus
total_bonus_usd	Total bonus in dollars (e.g. 312.75)

Because every view runs through the one calculation engine, the CSV, the on-screen totals, and the signed PDF always agree to the cent.

Frequently asked questions

Why did a processor earn \$0 on a busy-looking day?

They processed 50 or fewer mattresses. The bonus only starts on the 51st.

I entered the wrong count — can I fix it?

Yes, as long as the month is still *Draft*: just re-enter the correct count. After the month is signed, ask an administrator for an amendment.

Can I sign before all the counts are in?

No. Signing only becomes available after the month is closed and the totals are frozen.

Does it matter who signs first?

No. The facility and operations signatures can land in either order.

A processor changed their name — do I make a new record?

No. Use *Rename* so their full history stays attached to one record.

Rick cannot see Bonus Management — is that a bug?

No. Bonus is Woodland-only; the Eugene manager is correctly denied access.

NEED HELP?

For access changes, amendments, or anything that looks wrong, contact an administrator (Bill or Keisey). This guide reflects the live DR3-Vision bonus engine and ADR-0019.
